

Grant Finder

Description: A startup funding discovery platform where users from different industries and communities can find different reputable grant opportunities and create personal profiles to connect with others. Based on what kind of startup the user is involved in, the platform matches them to possible fundings and helps guide them through applying.

User Personas:

Startup founder: A person who has/is starting a new business and wants to find a network with other users also in the startup space.

Fundraising consultant: A person who assists companies and individuals find funding for projects and wants to have an easy to use platform to explore different possible grants.

User Stories:

1. As a small business founder I want assistance finding and completing federal grant applications in order to save time and confusion.
2. As a startup fundraising consultant I want to be suggested different types of grants based on what industry my profile is tagged with in order to narrow down funding options for different clients.
3. As a startup developer I want to be able to create, edit, and share my user profile in order for other developers and contacts to see what industries I work in and connect regarding funding.
4. As a researcher I want to be able to save grant opportunities in a private collection to come back to in order to compare the pros of each option.

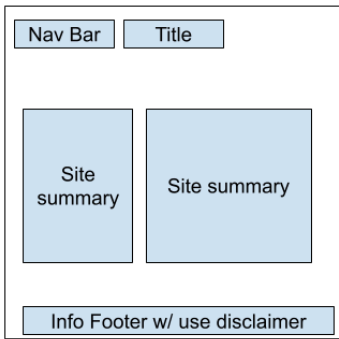

Work Assignment:

Claire : full stack for Story 3: users collection in MongoDB, Express routes for profile CRUD, vanilla JS frontend for profile create/edit/view/delete forms and display page.

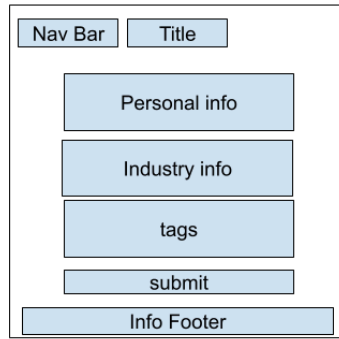

Tech Stack: Node.js, Express, MongoDB (Node driver), Vanilla ES6

Note: The only work implemented was the work assigned to Claire Stanton, so the site is lacking some other major components.
